Policy & Document Management Using ASPIA

This Standard Operating Procedure (SOP) outlines the step-by-step process for creating, managing, and resolving document within the ASPIA system, ensuring proper documentation, notifications, and status updates.

Purpose

The purpose of this Standard Operating Procedure (SOP) is to define the process for creating, reviewing, approving, publishing, maintaining, and re-submitting documents within the ASPIA system. This procedure ensures that all documents are managed in a controlled and consistent manner, appropriate approvals are obtained, review cycles are maintained, and relevant stakeholders are notified of required actions. The SOP also promotes accountability, compliance, and effective document governance throughout the document lifecycle.

Scope

This SOP applies to all users involved in the Document Program within the ASPIA system, including Document Owners, Approvers, Managers, and Administrators responsible for configuring notifications and escalation settings. It covers the complete document lifecycle, including document creation, submission for approval, review and approval activities, publication, rejection and revision processes, notification management, escalation procedures, periodic reviews, and re-submission following document updates.

Policy Statement

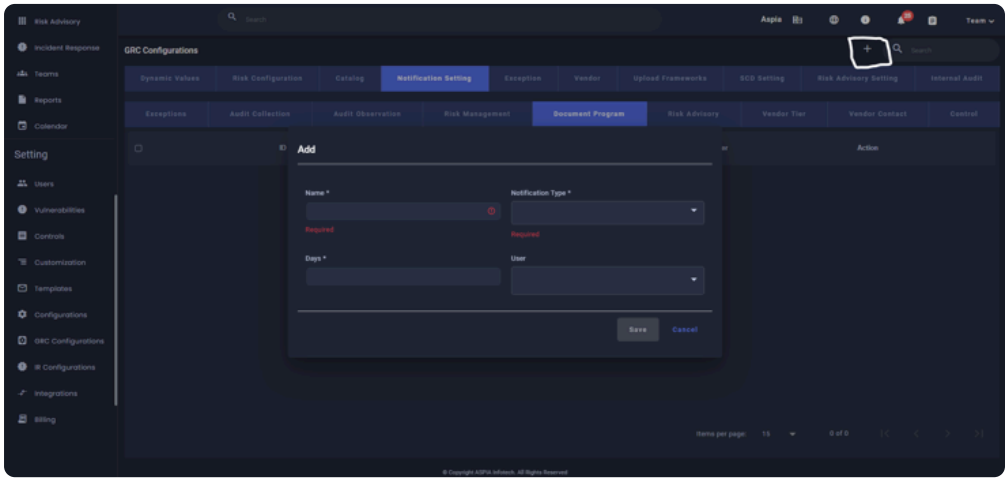

All documents maintained within the ASPIA system must follow the defined approval workflow before they are published or distributed. Document Owners are responsible for ensuring that submitted documents are accurate, complete, and updated when changes occur. Approvers are responsible for reviewing documents in a timely manner and providing appropriate approval or rejection comments. The system-generated notifications and escalation mechanisms must be utilized to support timely reviews and compliance with established review schedules. No document shall be considered active or officially published unless it has been approved through the ASPIA approval process. Any updates to approved documents that involve changes to supporting documents shall require re-submission and re-approval in accordance with this SOP.

Configurations

Notification Setting :-

Document Program Notification setting

- **Navigation:** Go to GRC Configuration > Notification Setting> Document Program. Click on the add button to add the notification setting.
- **Action**: This configuration sends email reminders and creates in-app notifications for documents that are nearing or have already passed their next review date.

Manager Level Escalation:-

Navigation:

Go to **GRC Configuration > Notification Setting > Document Program** and select any notification rule (Before or After).

While configuring the notification, you can set the **Manager Levels** value.

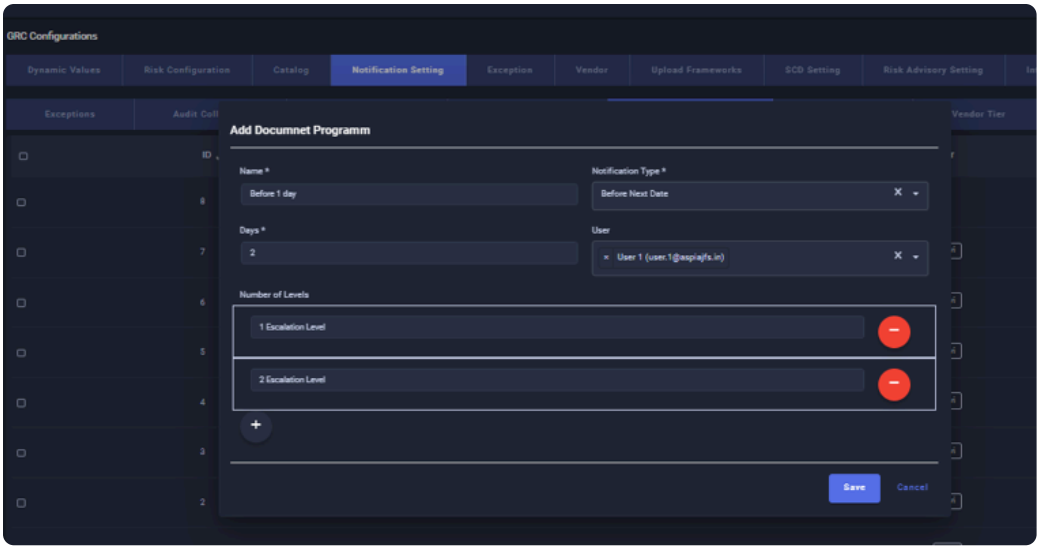

Usage:

Manager Level Escalation enables the system to automatically forward notifications to the supervisory hierarchy above the responsible user. This ensures visibility, accountability, and timely follow-up on documents activities.

Depending on the value set in **Manager Levels**, notifications will be escalated to:

- Level **1** → Sends notification to the user's **direct manager**
- Level **2** → Sends notification to the **manager** and the **manager's manager**
- Level **3+** → Escalates further up the chain, sending notifications to the next-level managers for the specified number of levels

This ensures that not only the responsible user but also their supervisory chain is informed about documents deadlines, breaches, or required follow-ups.

Dashboard and Repository

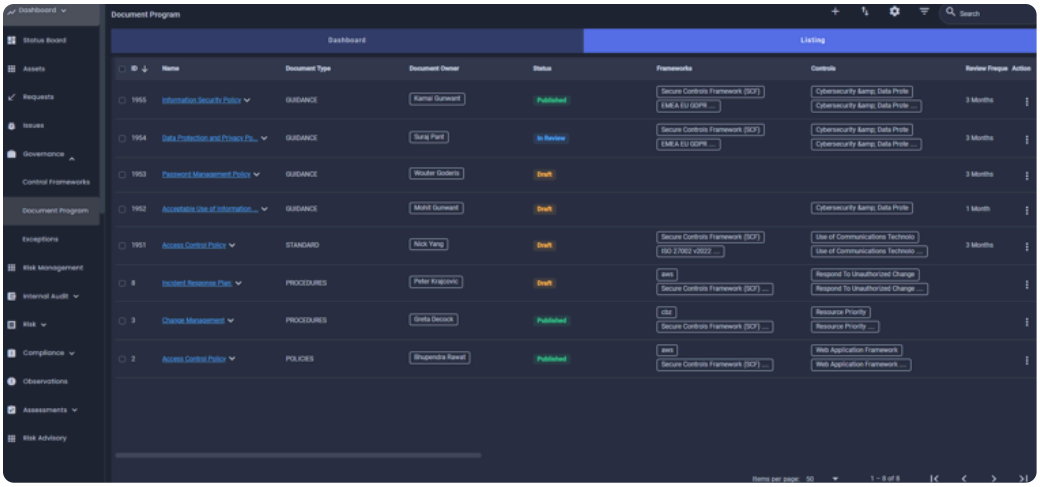

Repository

ASPIA provides a centralized repository for storing and managing governance documents, including policies, standards, procedures, guidelines, and supporting records.

Documents can be categorized using metadata such as:

- Document Type
- Owner
- Framework
- Control
- Status
- Review Frequency

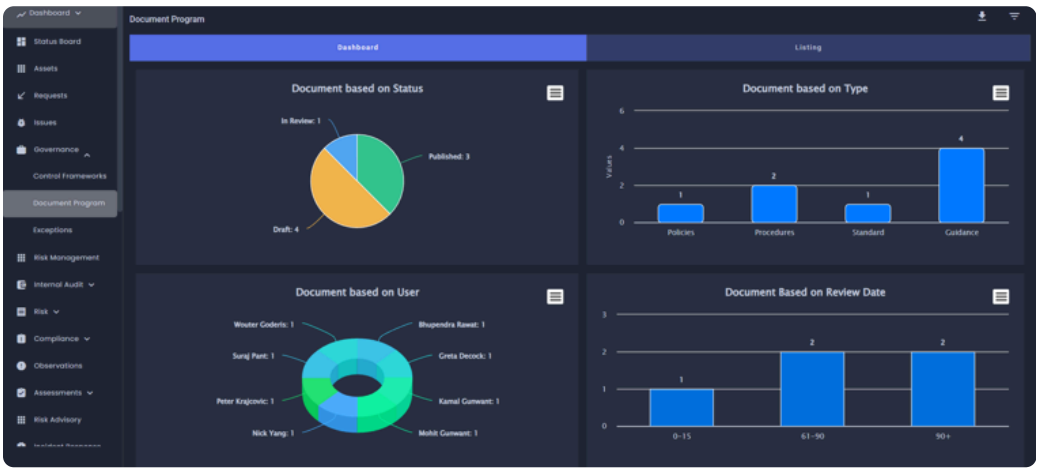

The repository enables authorized users to search, filter, retrieve, and maintain documents throughout their lifecycle.

Dashboard

- **Documents Based on Status:** Displays the number of documents in Draft, In Review, and Published status.
- **Documents Based on Type:** Shows the distribution of documents by type, such as Policies, Procedures, Standards, and Guidance.
- **Documents Based on User:** Displays the number of documents assigned to each document owner.
- **Documents Based on Review Date:** Highlights documents based on their upcoming review timelines to support timely reviews and compliance.

Note: Dashboard information is displayed based on the user's role and access permissions.

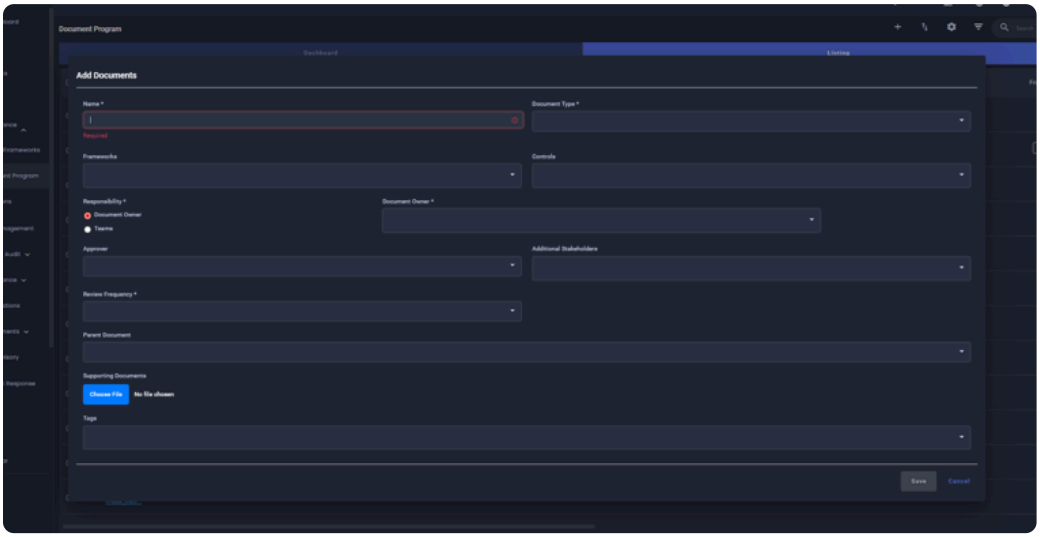

Workflow Overview

Step 1: Access the ASPIA Platform

- **Navigation**: Go to the "Document Program" module from the menu.

Step 2: Initiate a New Document Request

- **Action**: Click on the "Add" button.
- **Form Completion**:
- **Name**: Provide a name of the Document Program.
- **Document Type**: Specify the status for Document program.
- **Approver**: Specify the approver for the document program.
- **Document Owner :** This can be either an individual user or a team.
- **Framework:** Select the applicable framework(s) associated with the document.
- **Control:** Select the relevant control(s) linked to the document, if applicable.

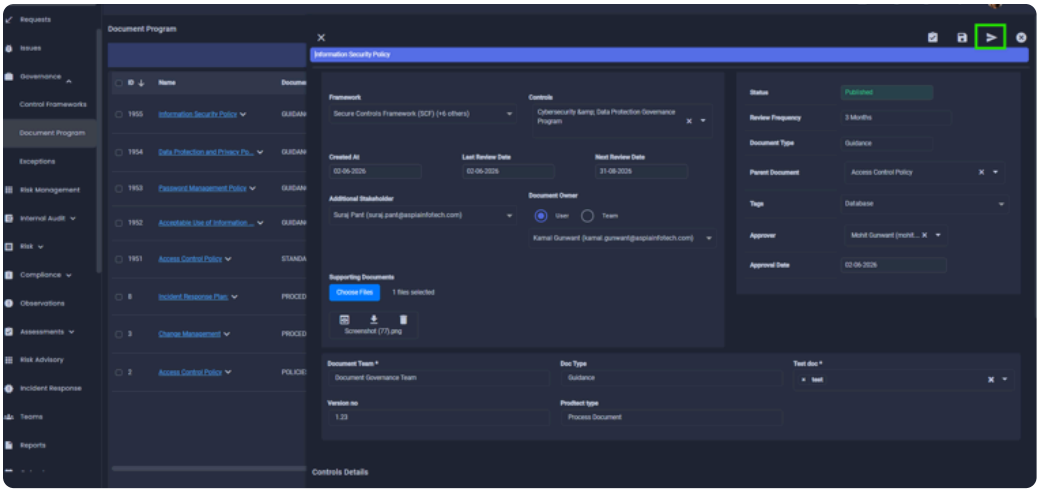

Step 3: Submit the Request

- **Action**: After completing the form, click the **"Save"** button. The system will automatically set the collection status to **Draft**.

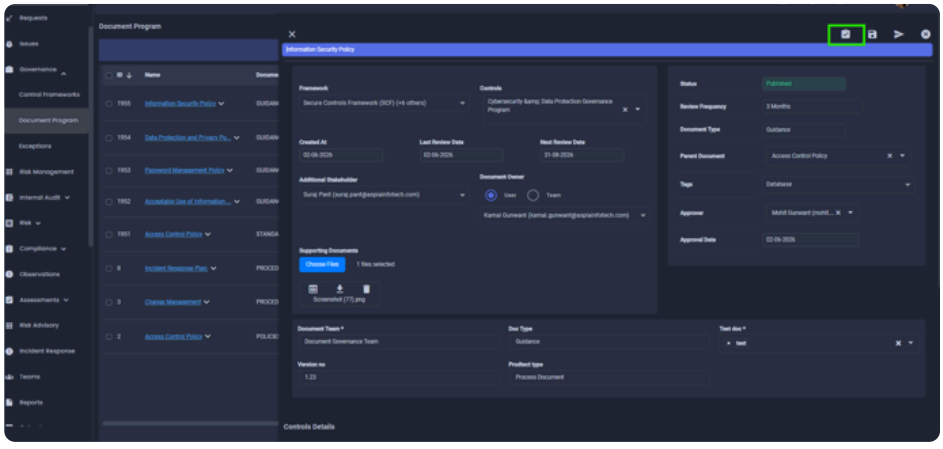

Step 4:Send the Document For Approval

- **Purpose**: The purpose of sending the document to the approver is to ensure it is properly reviewed and approved before any further processing or distribution.
- **Action:** Once the document is sent for approval using the **"Send"** button, its status is automatically changed to **"In Review"**, and an email notification is triggered to the assigned approver.

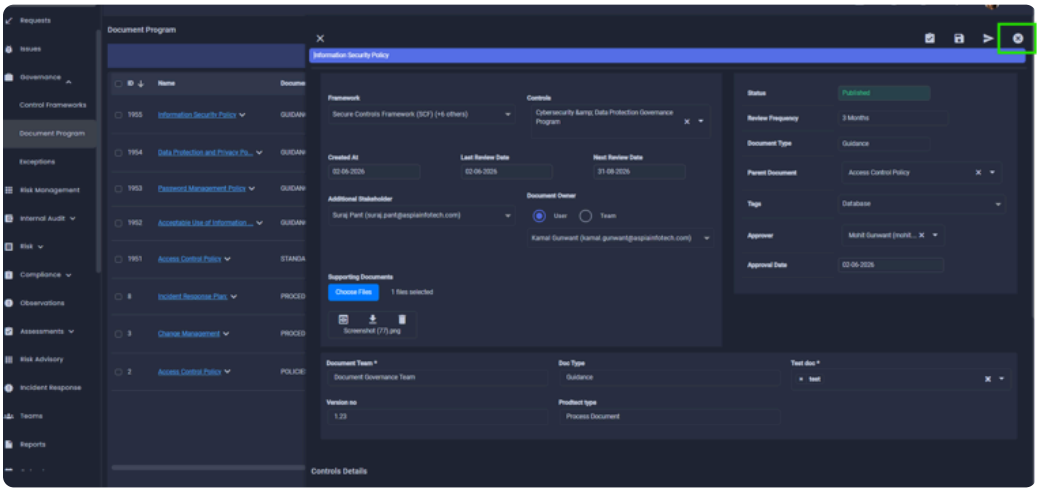

Step 5: Document is reviewed by the approver

- **Purpose:**
  An email is sent to the approver, requesting them to review the document thoroughly and take appropriate action.
- **Action:**
  The approver accesses the document, reviews its contents, and either approves or rejects it:
  - **If approved**:
    - The document status is updated to **Published**.
    - The **Last Review Date** and **Approved Date** are set to the current date.
    - The **Next Review Date** is automatically calculated based on the configured review frequency.
    - At the time of approval, the **approver can add a message**, which is saved and displayed in the document's **Comment section**.
    - An email notification is sent to the **document owner** informing them of the approval.

  - **If rejected**:

- The document status is reverted to **Draft** for further revision.
- At the time of rejection, the **approver can add a message**, which is saved and displayed in the document's **Comment section**.
- An email notification is sent to the **document owner** informing them of the rejection and any necessary changes.

Step 6: Resend After Rejection or Approval (When Supporting Documents Are Updated)

- **Purpose:**
  When a document is **rejected** or **previously approved**, and new **Supporting Documents** are uploaded, it must be re-submitted for approval to ensure that all updates are properly reviewed and authorized.
- **Action:**
  a. The **owner uploads new Supporting Documents**.
    - The system automatically sets the document status to **Draft**.

  b. The **owner clicks "Resend for Approval"**.
    - Status changes to **In Review**.
    - An **email notification is sent to the Approver** to review the updated document.

  c. The **approver reviews the document** and takes one of the following actions:
    - **If Approved**:
      - Status is updated to **Published**.
      - **Approved Date** and **Last Review Date** are set to the current date.
      - **Next Review Date** is calculated based on the document's review frequency.
      - An **approval message** is entered by the approver and stored.
      - This message is displayed in the **Comment Section** of the document.

    - An **email notification is sent to the Document Owner** confirming the approval.
- **If Rejected**:
    - Status is reverted to **Draft**.
    - A **rejection message** is entered by the approver and stored.
    - This message is displayed in the **Comment Section** of the document.
    - An **email notification is sent to the Document Owner** notifying them of the rejection.

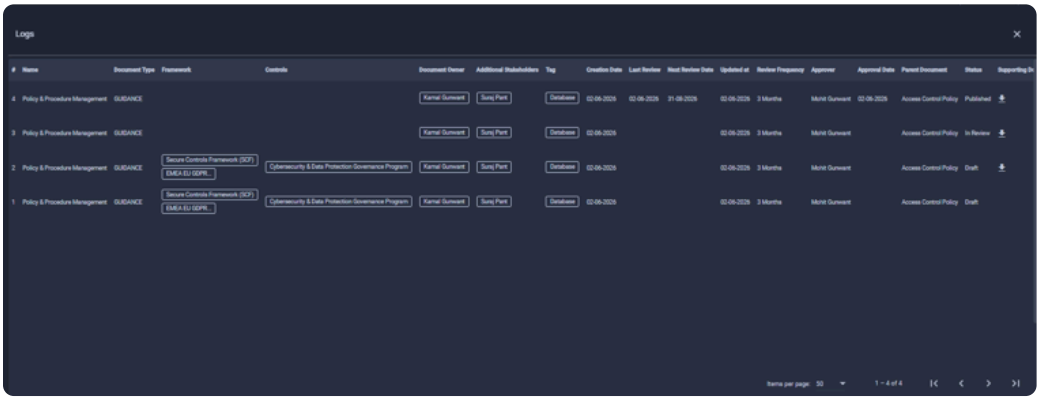

Version Control & Audit Trail

ASPIA maintains a complete version history and audit trail for all documents managed within the system. The Audit Trail records all document-related activities and provides visibility into historical changes made throughout the document lifecycle.

The Audit Trail captures details such as:

- Document creation and updates
- Changes made to document information and metadata
- Upload and replacement of supporting documents
- Submission and re-submission for approval
- Approval and rejection actions
- Status changes (Draft, In Review, Published)
- User details associated with each action
- Date and time stamps for all activities
- Historical document versions and modifications

Users can review previous document changes through the Audit Trail, enabling full traceability, accountability, and version tracking. This helps organizations maintain document governance, support compliance requirements, and provide evidence during audits and reviews.

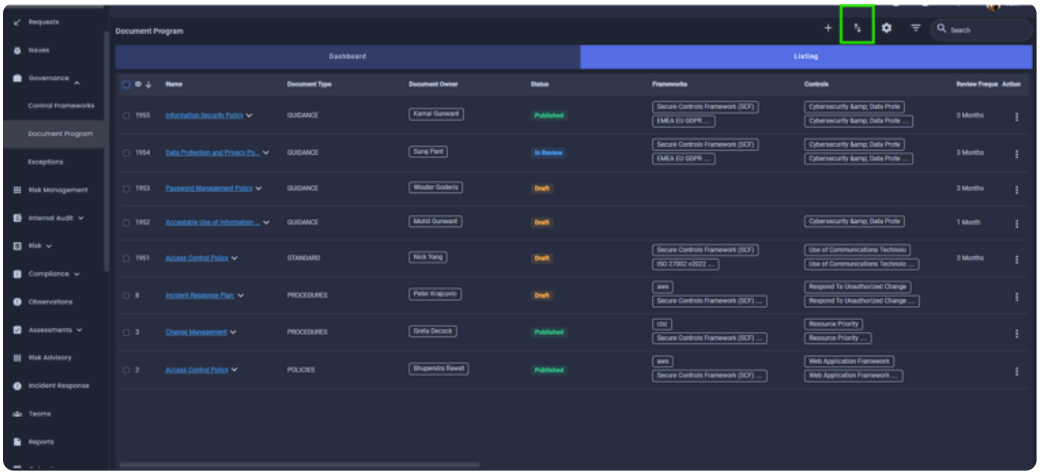

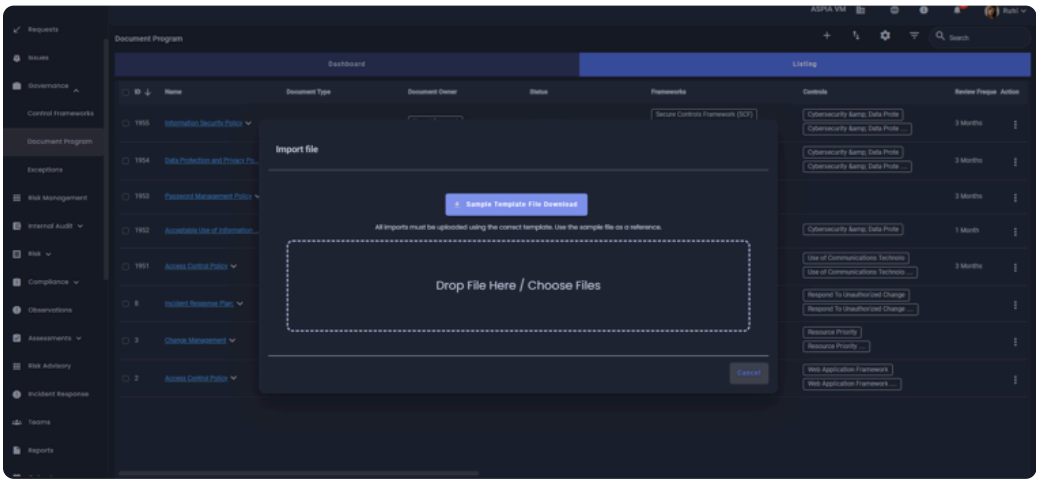

Document Import & Export

ASPIA supports document import and export capabilities to facilitate efficient document management and migration activities.

Import Functionality

Authorized users can import document records and associated information into the system using supported templates, reducing manual effort and enabling bulk document onboarding.

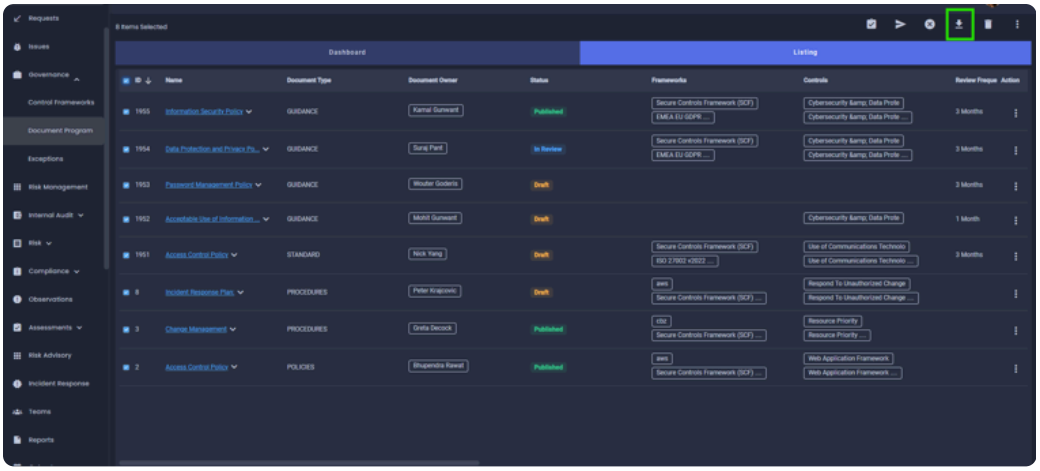

Export Functionality

Users can export document information and reports from the system for review, audit, compliance, and management reporting purposes.

These capabilities help organizations efficiently manage large document repositories while maintaining consistency and governance controls.
