SOP for Observation

This Standard Operating Procedure (SOP) outlines the step-by-step process for creating, managing, and resolving observations within the ASPIA system, ensuring proper documentation, notifications, and status updates.

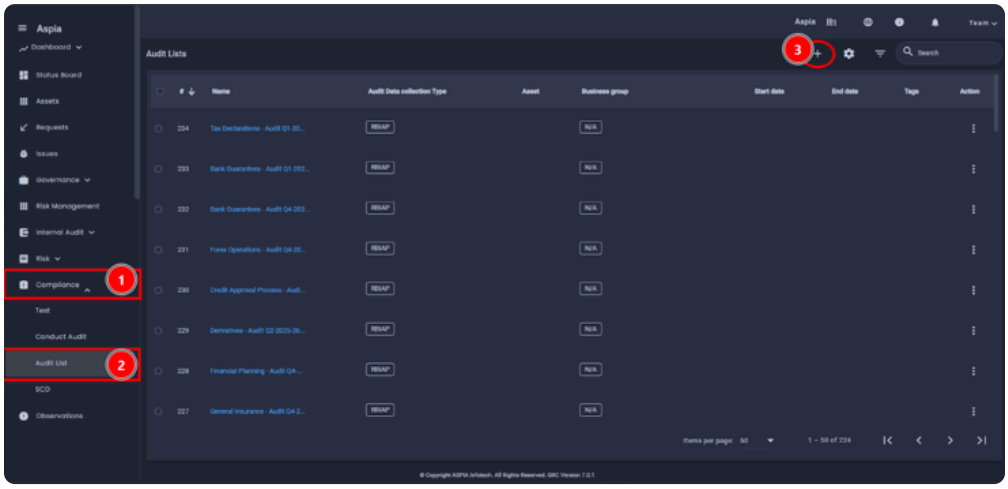

1. Creating a New Observation

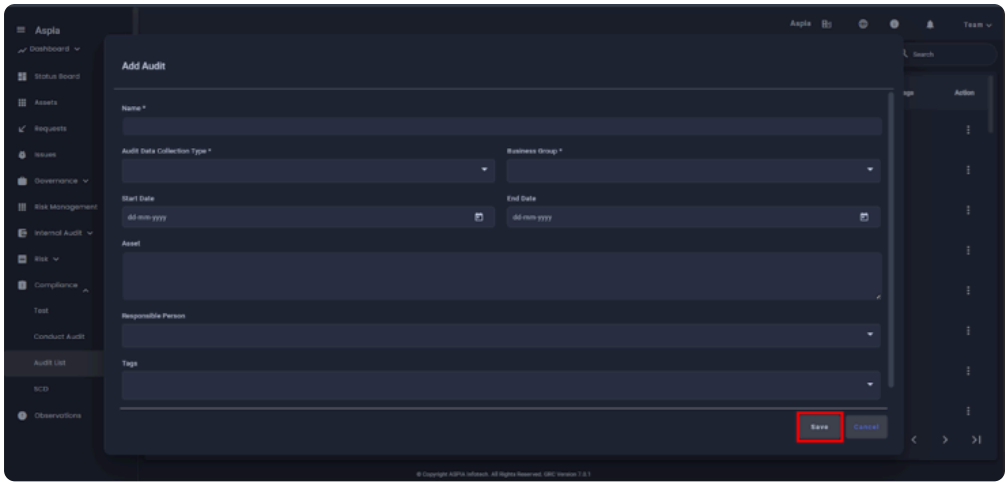

Purpose:
To ensure that observations are properly documented, assigned, and initiated with clear notifications to relevant parties.

Steps:

- **Step 1: Log in to ASPIA**
  Use your credentials to log into the ASPIA platform with the necessary permissions to create observations.
- **Step 2: Create the Related Audit**
  Before creating an observation, ensure that the relevant audit has already been created in the system.

  Navigate to **Compliance → Audit List** and create a new audit if one does not already exist. Once the audit is available, open the audit from the **Audit List**.

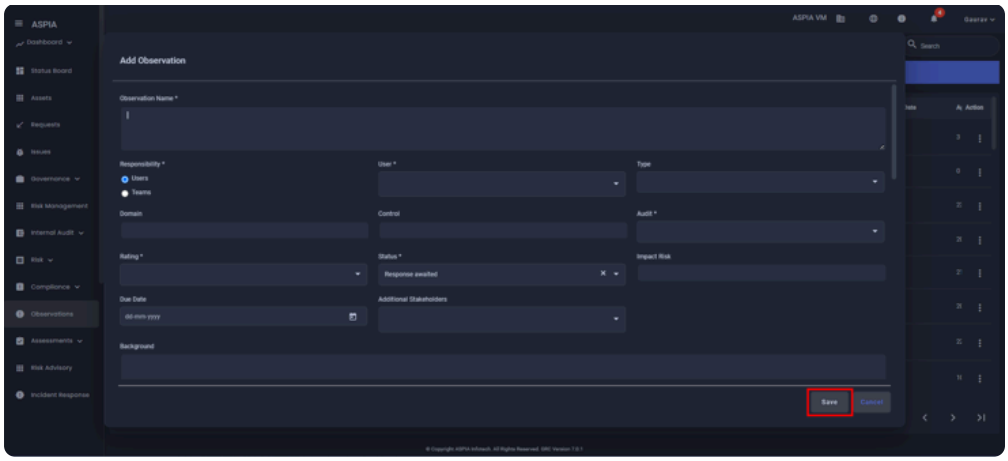

- **Step 3:Navigate to the Observation Section**

  On the dashboard, go to the **Observations → Listing**. Click on the **+** icon to create a new observation.

- **Step 4: Fill in the Observation Form and Select the Primary Responsible Person**

  Provide the required details such as the observation type, description, and select the primary responsible person from the list.

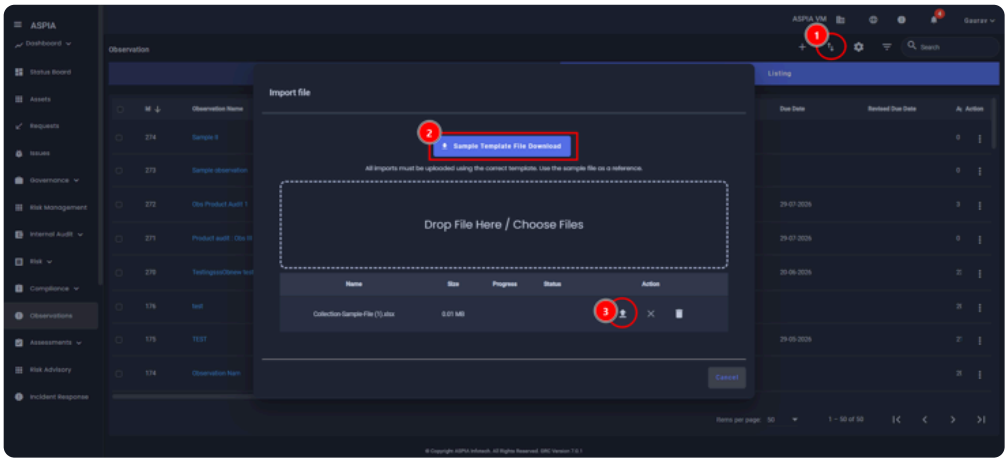

- **Step 5: Save Observation**

  After filling in the necessary fields, click **Save**.

The system will automatically set the observation status to **Response Awaited** and trigger an **automatic email notification** to the assigned responsible person.

- **Import Observations:**
  - Click the **Import** option to upload multiple observations in bulk. Click **Download Sample File** to download the import template. Populate the template with the required observation details while following the prescribed format.

  - **Upload the Completed File:** Upload the completed template using the **Import** option.
    - If the import contains validation errors, the system will display a notification with the details of the failed records and the corresponding error messages so that they can be corrected and re-uploaded.
    - If the import is successful, all imported observations will be created and displayed in the **Observation Listing**.
    - The system will automatically set all successfully created observations to *Response Awaited* and send a consolidated email notification to each assigned responsible person, containing the list of observations assigned to them.

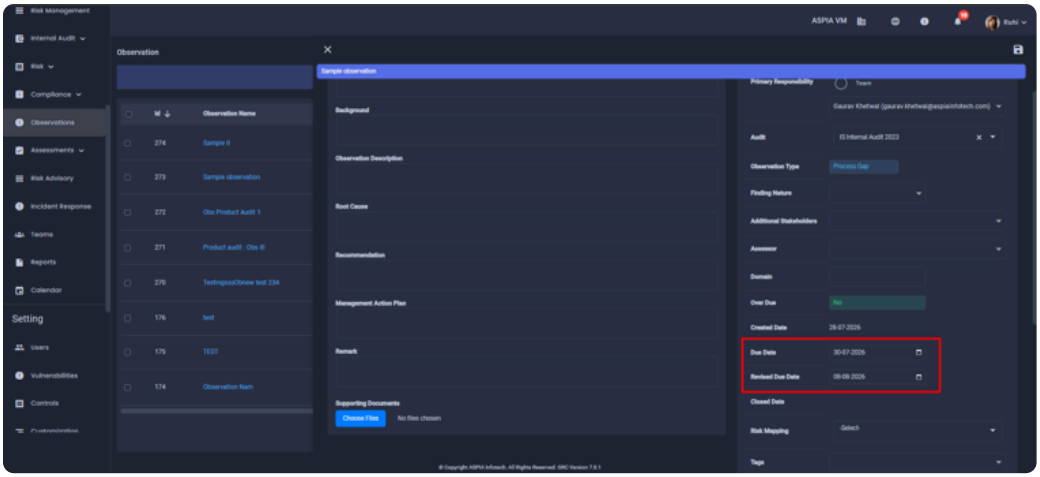

---

2. Update Due Date / Revised Due Date

Purpose:

To allow the Primary Responsible Person to set the initial Due Date for an observation and, if required, update the Revised Due Date based on the expected timeline for resolving the observation.

Steps:

Step 1: Update Due Date

The Primary Responsible Person logs in to the ASPIA platform and navigates to the assigned observation using the link provided in the email notification or through **Observations → Listing**.

Open the observation, enter the expected **Due Date**, and click **Save**.

Step 2: Update Revised Due Date (If Required)

After the Due Date has been saved, the **Revised Due Date** field becomes available.

If the original Due Date needs to be extended or modified, enter the **Revised Due Date** and save the changes.

Step 3: Observation Status Update

After saving the observation:

- If a **Revised Due Date** has been provided, the system updates the observation status based on the **Revised Due Date**.
- If no **Revised Due Date** has been provided, the system updates the observation status based on the **Due Date**.

The observation status is updated as follows:

- If the applicable due date is **more than 30 days** from the current date, the status is set to **NOT DUE**.
- If the applicable due date is **within the next 30 days**, the status is set to **DUE SOON**.
- If the applicable due date has passed and the observation remains open, the status is set to **OVERDUE**.

---

3. Uploading Closure Evidence

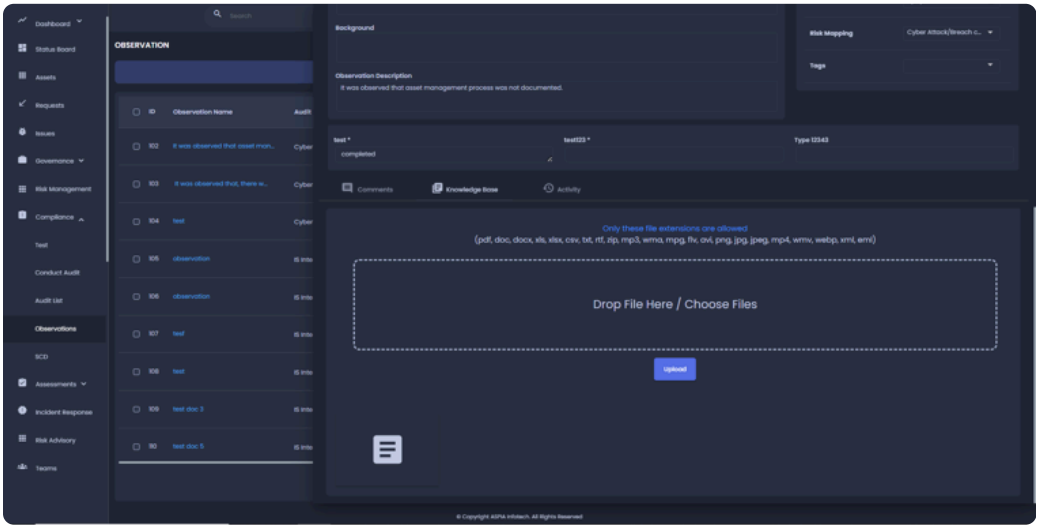

Purpose:

Once the responsible person fixes the observation, they can upload evidence to submit

supporting documents and update the observation's status for further validation.

Steps:

- **Step 1: Upload Document**
  The responsible person can upload relevant documents by selecting the **Knowledge Base** option within the observation.
  Browse your system and attach the required document.
- **Step 2: Status Update**
  - Once the document is uploaded, the status of the observation will change to **Under Validation**.
  - The system automatically triggers an email, informing that the observation is ready for validation.

---

4. Validating and Closing the Observation

Purpose:
To review and validate the observation, ensuring its proper resolution or requesting additional clarification.

Steps:

- **Step 1: Review by Security Manager/Auditor**
  The **Security Manager/Auditor** will review the uploaded documentation under the **Under Validation** status.
- **Step 2: Update Status**
  - If the evidence is valid, the Security Manager/Auditor will update the status to **Closed**.

- If further clarification or additional documents are required, the status can be reverted to **Response Awaited** for the responsible person to act and the status will again change to the status according to the due date.

---

5. Automatic Notifications

Purpose:

To notify relevant parties about the observation's due dates and status updates.

Steps:

- **Step 1: Notification Settings**
  Emails will automatically be sent based on the due date and observation status. Notifications will be sent:
  - **Before the due date**: A reminder email will be sent to the primary responsible person and any users in the CC list.
  - **After the due date**: If unresolved, reminder emails will continue to be sent until the observation is closed.
- **Step 2: Stop Notifications**
  Once the observation status is updated to **Closed**, all due date notifications will stop.

---

6. Additional Observation Status Rules

- **NOT DUE**: If the due date is more than 30 days from the current date.
- **DUE SOON**: If the due date is within 30 days.
- **Over Due:** if todays date is greater then due date.
- **Under Validation**: After the evidence upload, pending review by the Security Manager/Auditor.
- **Response Awaited**: If clarification or further action is needed after validation.
- **Closed**: Once the observation is resolved and no further action is required.

---

7. Setting Up Due Date Notifications

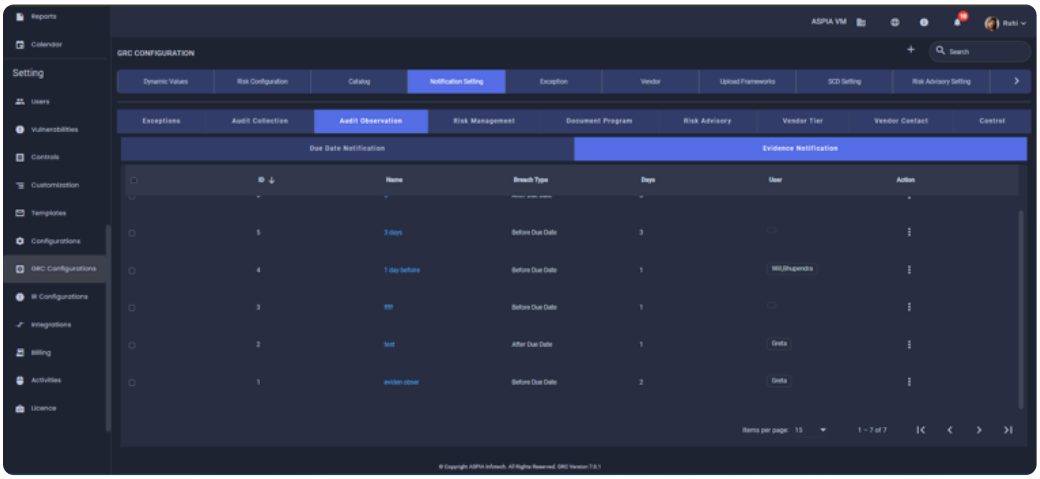

Purpose:

To configure email notifications for observations before and after their due date.

Procedure:

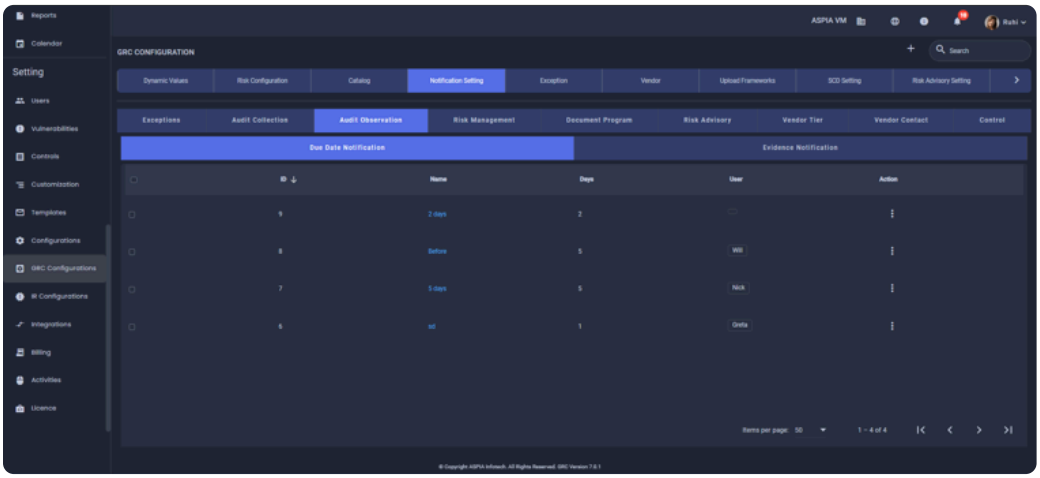

Step 1: Configure Notification Settings

- Add due date notification settings for the system to automatically trigger emails before and after the due date.
- Emails will be sent to the primary responsible person, with CC to selected notification recipients.

NOTIFICATION SETTING(When due date null)

- Add notification settings for the system to automatically trigger emails on the basis of created date.
- Emails will be sent to the primary responsible person, with CC to selected notification recipients.

Manager Level Escalation:-

Navigation:

Go to **GRC Configuration > Notification Setting > Audit Observation** and select any

notification rule (Before or After).
While configuring the notification, you can set the **Manager Levels** value.

Usage:
Manager Level Escalation enables the system to automatically forward notifications to the supervisory hierarchy above the responsible user. This ensures visibility, accountability, and timely follow-up on observations activities.

Depending on the value set in **Manager Levels**, notifications will be escalated to:

- Level **1** → Sends notification to the user's **direct manager**
- Level **2** → Sends notification to the **manager** and the **manager's manager**
- Level **3+** → Escalates further up the chain, sending notifications to the next-level managers for the specified number of levels

This ensures that not only the responsible user but also their supervisory chain is informed about observations deadlines, breaches, or required follow-ups.
